

TAM THUC STRATEGEM

Detailed Data Models and Database Schema v1.0

1. CÁC BẢNG CHÍNH VÀ MỐI QUAN HỆ

****users****

- id, email, password_hash, birth_data (encrypted JSONB), preferences (JSONB), created_at, updated_at

****queries****

- id, user_id (FK), query_type, input_data (JSONB), systems_used (text[]), created_at

****charts****

- id, query_id (FK), system, chart_data (JSONB), patterns_detected (JSONB), created_at

****knowledge_patterns****

- id, system, name, conditions (JSONB), meaning_classical, meaning_modern, citations (text[]), version, created_at

****reports****

- id, query_id (FK), report_data (JSONB), pdf_path, generated_at

****audit_logs**** (optional nhưng khuyến khích)

- id, user_id, action, details (JSONB), created_at

2. INDEXING QUAN TRỌNG

- users.email (unique)
- queries.user_id + created_at (composite)
- charts.query_id
- knowledge_patterns.system + name
- GIN index trên các JSONB fields (chart_data, conditions, patterns_detected) để query nhanh

3. DATA MODEL CHO CHART (JSONB)

Mỗi chart nên có cấu trúc JSON rõ ràng, ví dụ cho Kỳ Môn:

```
```json { "ju": 4, "dun": "yang", "palaces": [ { "position": 1, "stem": "Giáp", "star": "Thiên Phủ", "door": "Sinh", "god": "...", "metadata": {...} }, ... ] } ```
```
